EXPERIENCE

Google

Software Engineer: Google Cloud Business Partners - Sunnyvale, CA

Sep 2026 - Current

– TBD

Microsoft

Software Engineer: Azure Front Door - Redmond, WA

Sep 2025 - Sep 2026

- Built Osmosis, an E2E agent that links multiple repos from Control Plane to Data Plane that reduced dev time from 2 weeks to 2 days for features such as adding server variables and PQC selection
- Implemented Traffic Replayer, a system that clones 0.01% of production traffic to Pre-Production Envs (PPE), which validates new builds through A/B comparison and tests custom builds without risk of customer impact
- Increased total code coverage by 6% and saved 500+ hours of dev time building RCM Tester, a testing framework for auto-generating tests

INTERNSHIPS

Google

Software Engineer Intern: Google Cloud Business Partner - Kirkland, WA

Jun 2025 - Aug 2025

- Completed the E2E redline obligation extraction, which uses an LLM to extract critical data from edited contracts
- Eliminated malformed responses (reduced to 0.0%) and improved obligation metadata extraction accuracy to 86% in model tuning when tested on 1000+ obligations (Python)
- Reduced integration time by 72% for 50+ obligation types by designing a type-safe response Gemini library (Java)

Microsoft

Software Engineer Intern: Azure Networking - Redmond, WA

Jun 2024 - Aug 2024

- Designed a new feature in Azure Front Door (Azure's CDN built on-top of Nginx) allowing customers to route requests to external endpoints for verification before reaching their origin
- Implemented E2E in the control plane (C#) and data plane (C, Rust), which served as underlying design/proof-of-concept for Azure Front Door Edge Actions

Purdue University ([GitHub](#)) ([Paper](#))

Research Intern - Lafayette, IN

Jun 2023 - Aug 2023

- Retained 98% of the criticality algorithm's performance using only 5 features with machine learning in Python and R
- Improves identification of the most significant open source projects for the Open Source Security Foundation
- Presented at NDiStem Conference in Portland Oregon with a travel scholarship

RESEARCH

Parsons Blocks: Effective Teaching Questions - Terre Haute, Indiana

Mar 2023 - Feb 2025

- Used Parson Blocks to identify 10+ student misconceptions and reduce average homework time by 28%
- Increased average exam scores by 7% by designing an ETL pipeline to collect, analyze, and visualize different problem set data using Python and Java
- Ranked algorithms (edit distance, LCS) for determining 'distance' from the correct answer using ML

High Accuracy Classification of Myopathy ([Project Showcase](#))

Apr 2020 - Sep 2020

- Won 3rd Place Grand Award in Bioinformatics at Regeneron International Science and Engineering Fair (ISEF)
- Classified myopathy EMG imaes with 96.57% accuracy using a deep neural network (Python, MATLAB)

EDUCATION

Bachelors of Science, Computer Science

GPA: 4.0/4.0

Minors in Mathematics, Data Science

May 2025

Rose-Hulman Institute of Technology, Terre Haute, IN

Relevant coursework: Deep Learning, Image Recognition, AI, Generative AI,

Linear Algebra, Probability & Statistics, Combinatorics, Data Mining, Computer Networks
